

## MEMBER RESEARCH

### **(1) Michelle Francis, Masters in OHS at ECU candidate.**

"Workplace Psychosocial Safety Climate Study"

Be part of an important study to help understand the impact of workplace mental health and how it is prioritised by completing a quick and easy online sliding-scale questionnaire that will take 10-15 minutes.

Once data has been collected and analysed, you may request a copy of the final findings that will help bridge a gap in research of psychosocial safety climate on employee engagement, job satisfaction and psychological distress within the mining and construction industries.

### **(2) Manda Trevarthen, Doctor of Business Administration candidate at UWA.**

Manda's research is looking at how knowledge is transferred through the knowledge tools used to identify hazards on construction sites such as safe work method statements, job hazard analysis, take 5's etc.

I am looking for people who work in construction and are willing to be interviewed for my research. In particular, I'm targeting health and safety professionals, construction trades workers and their supervisors. The interviews are confidential, take about 45 minutes and can be conducted one-on-one or in small groups (I have found small group interviews seems to work better with construction trades people). I have attached an information form which provides further details about my research.

I would appreciate any suggestions you have on people who may be willing to participate. I can be contacted either by email at [manda.trevarthen@gmail.com](mailto:manda.trevarthen@gmail.com) or mobile 0448 247 317

### **(3) Tereen Hough, Masters in OHS at ECU candidate.**

My name is Tereen Hough, a student at Edith Cowan University, completing a Master of Occupational Health and Safety.

My research project, titled 'Electronic Cigarettes in the Workplace – Should OHS professionals champion them?' investigates the current state of policy with respect to vaping in Australian workplaces, with the view of assisting OHS professionals to develop future policy, informed by the latest research.

I have designed a short, anonymous, online tool, to survey OHS professionals. The survey includes an information letter about the project, and participation is voluntary. Please click on the link below, which will take you to the consent page, and the survey. The research has been approved by the ethics committee at Edith Cowan University, and is supervised by A/Prof Jacques Oosthuizen, Email: [j.oosthuizen@ecu.edu.au](mailto:j.oosthuizen@ecu.edu.au)
